

Submodule-Dependency-Manifest

(§11.4.31) Debt Audit

Revision: 1 **Last modified:** 2026-06-17T05:01:35Z

Per HelixConstitution §11.4.31 — **Submodule-Dependency-Manifest Mandate:** every owned-by-us submodule **MUST** ship a machine-readable dependency manifest at the canonical path `helix-deps.yaml` (or `.json` / `.toml`) at its root, declaring its own-org Git SSH dependencies.

This audit is **read-only, evidence-backed** (§11.4 anti-bluff, §11.4.6 no-guessing). Each row below is derived from `test -f <path>/helix-deps.{yaml,json,toml}` against the live working tree at the timestamp above.

Scope

- **Source of submodule paths:** `git config -f .gitmodules --get-regexp 'path'`.
- **Excluded (non-contention carve-out — main stream concurrently renaming):** Core, Web-Client, Desktop-Client, Android-Client, iOS-Client, Screensaver, and constitution (constitution submodule itself).
- **Manifest filenames checked:** `helix-deps.yaml`, `helix-deps.json`, `helix-deps.toml`.

Summary

Metric	Count
Submodules audited (in scope)	47
WITH manifest	14
MISSING manifest (the §11.4.31 debt)	33

Per-submodule audit table

Submodule	Manifest present?	Manifest file	Declared-deps count
harmony_os_client	NO	—	—
aurora_os_client	NO	—	—
containers	YES	helix-deps.yaml	0 (leaf)

Submodule	Manifest present?	Manifest file	Declared-deps count
docs_chain	YES	helix-deps.yaml	0 (leaf)
challenges	YES	helix-deps.yaml	2
helix_qa	YES	helix-deps.yaml	8
helix_agent	YES	helix-deps.yaml	42
panoptic	NO	—	—
doc_processor	NO	—	—
llm_orchestrator	NO	—	—
llm_provider	NO	—	—
llms_verifier	YES	helix-deps.yaml	1
security	YES	helix-deps.yaml	0 (leaf)
vision_engine	YES	helix-deps.yaml	0 (leaf)

streaming	NO	—	—
tool_schema	NO	—	—
vector_db	NO	—	—
conversation	NO	—	—
cache	YES	helix-deps.yaml	0 (leaf)

Debt list — submodules MISSING a helix-deps.* manifest (33)

These 33 in-scope own-org submodules carry NO helix-deps.yaml / .json / .toml at their root and are therefore in violation of §11.4.31 until a manifest is authored:

1. harmony_os_client
2. aurora_os_client
3. panoptic
4. doc_processor
5. llm_orchestrator
6. llm_provider
7. agentic
8. background_tasks
9. benchmark
10. debate_orchestrator
11. embeddings
12. event_bus
13. formatters
14. helix_memory
15. helix_specifier
16. llm_ops
17. mcp_module
18. memory
19. messaging
20. models
21. normalize

- 22. optimization
- 23. planning
- 24. plugins
- 25. rag
- 26. red_team
- 27. self_improve
- 28. skill_registry
- 29. storage
- 30. streaming
- 31. tool_schema
- 32. vector_db
- 33. conversation

Note (forensic, §11.4.6): several of these (agentic, auth-class peers, background_tasks, models, etc.) are referenced as declared deps inside helix_agent/helix-deps.yaml (42 declared own-org deps via go.mod replace), so the absence of their OWN manifest is a concrete cross-reconstruction gap — a consumer cloning helix_agent cannot recurse into these peers to learn THEIR transitive own-org deps (§11.4.31 transitive_handling.recursive: true).

Has-manifest section (14)

The following in-scope submodules satisfy §11.4.31. The declared-deps count is the count of `name:` entries under the manifest `deps:` block (`0 (leaf)` = explicit `deps: []` honest leaf manifest):

Submodule	Declared-deps count	Notes (from manifest header / deps)
containers	0 (leaf)	Leaf Go submodule, <code>deps: []</code> .
docs_chain	0 (leaf)	Leaf Go submodule (digital.vasic.docs_chain), <code>deps: []</code> .
challenges	2	containers (vasic-digital), Panoptic (vasic-digital) — Panoptic flagged as the tracked §11.4.28 nested-own-org violation to flatten.
helix_qa	8	Challenges, Containers, DocProcessor, LLMOrchestrator, LLMProvider, LLMsVerifier, security, VisionEngine — matches go.mod replace block.
helix_agent	42	dev.helix.dag (DagOrchestrator) + 41 digital.vasic.* modules via go.mod

Submodule	Declared-deps count	Notes (from manifest header / deps)
		replace; manifest header notes some why: lines are [inferred].
llms_verifier	1	Challenges (vasic-digital) — corrected 2026-06-08 to match actual go.mod replace blocks.
security	0 (leaf)	Leaf Go submodule, deps: [].
vision_engine	0 (leaf)	Leaf Go submodule (digital.vasic.visionengine), deps: [].
dag_orchestrator	0 (leaf)	Standalone Go module (dev.helix.dag), deps: [] scaffold.
auth	0 (leaf)	Leaf Go submodule (digital.vasic.auth), deps: [].
concurrency	0 (leaf)	Leaf Go submodule, deps: [].
database	0 (leaf)	Leaf Go submodule, deps: [].
observability	0 (leaf)	Leaf Go submodule, deps: [].
cache	0 (leaf)	Leaf Go submodule, deps: [].
