

System SQL Reference

Derived from the Core SQL DDL definitions by the Docs Chain `sql-to-doc` transform (§11.4.106). The `.sql` DDL files are the sole authority; this document is generated from them and **MUST NOT** be hand-edited (`doc -> sql` is intentionally unimplemented pending a §11.4.133 review). Regenerate via `docs_chain sync` on the `sql_definitions` context.

Table Inventory (all DDL blocks)

Total distinct tables across all DDL sources: **162**

- `account`
