

# CONTINUATION — Helix-Track / Everything

Revision: 1 · Last modified: 2026-06-16

Cross-session handoff (Constitution §12.10 / §11.4.131). Read this FIRST, then `git fetch --all` before resuming.

## Current phase

Constitution-inheritance wiring: **COMPLETE and pushed** to all GitHub remotes; full audit done.

## Live-state anchors

- Parent Helix-Track/Everything HEAD = e10cbdf (== origin/main, verified).
- constitution/ submodule pinned at 1d408cb (HelixDevelopment/ HelixConstitution main; no v1.0.0 tag exists).
- 8 owned submodules committed + pushed (gitlink == local == remote, all verified): Core 6aae01f · Web-Client 45e8530 · Desktop-Client a2b3e29 · Android-Client 850b96e · iOS-Client 0719e57 · Harmony-OS-Client d1d45d0 · Aurora-OS-Client 2c786fd · Screensaver 093fd8e.
- .git hardlink backup: helix\_track\_git\_backups/20260616-225044/ repo.git.mirror.

## Verify the inheritance is intact

```
bash tests/test_constitution_inheritance.sh #
expect rc 0
bash scripts/testing/meta_test_false_positive_proof.sh #
expect rc 0 (anti-bluff §1.1)
```

## Binding constraints

Anti-bluff §11.4; no `--force` / `--no-verify` (§11.4.113); no credentials in constitution/ (§11.4.10); parent commits via `./commit` wrapper (§2). System / tmp volume was 100% full — keep `TMPDIR=/Volumes/T7/tmp` for git ops.

## Open operator decisions (from CONSTITUTION\_COMPLIANCE\_AUDIT.md)

§11.4.78 CodeGraph index · §11.4.109 PreToolUse guard hook · §11.4.12/.60/.65  
Markdown HTML/PDF export pipeline · §11.4.157 GEMINI.md/QWEN.md  
carriers. None blocking; each needs an explicit go/no-go.

## Ready-to-paste resumption prompt (§11.4.127)

```
Resume Helix-Track. Constitution inheritance is wired + pushed (parent  
e10cbdf, constitution pinned 1d408cb, all 8 submodules pushed). First run  
git fetch --all then bash tests/  
test_constitution_inheritance.sh and bash scripts/testing/  
meta_test_false_positive_proof.sh (both must be rc 0). Then address  
the open operator decisions in CONSTITUTION_COMPLIANCE_AUDIT.md  
(CodeGraph index, PreToolUse guard hook, Markdown export pipeline,  
GEMINI/QWEN carriers). Obey anti-bluff §11.4, no --force/--no-verify,  
TMPDIR=/Volumes/T7/tmp.
```
